

Rehabilitation Capability

Leveraging our history and experience to deliver for the future

BUMA Australia has established a solid foundation in the Queensland mining industry as a highly experienced and reliable tier one service provider. From our origins as Roche Mining and later as Downer Mining, BUMA Australia has a vision to build a modern mining and rehabilitation company, that drives growth, sustainability and prosperity.

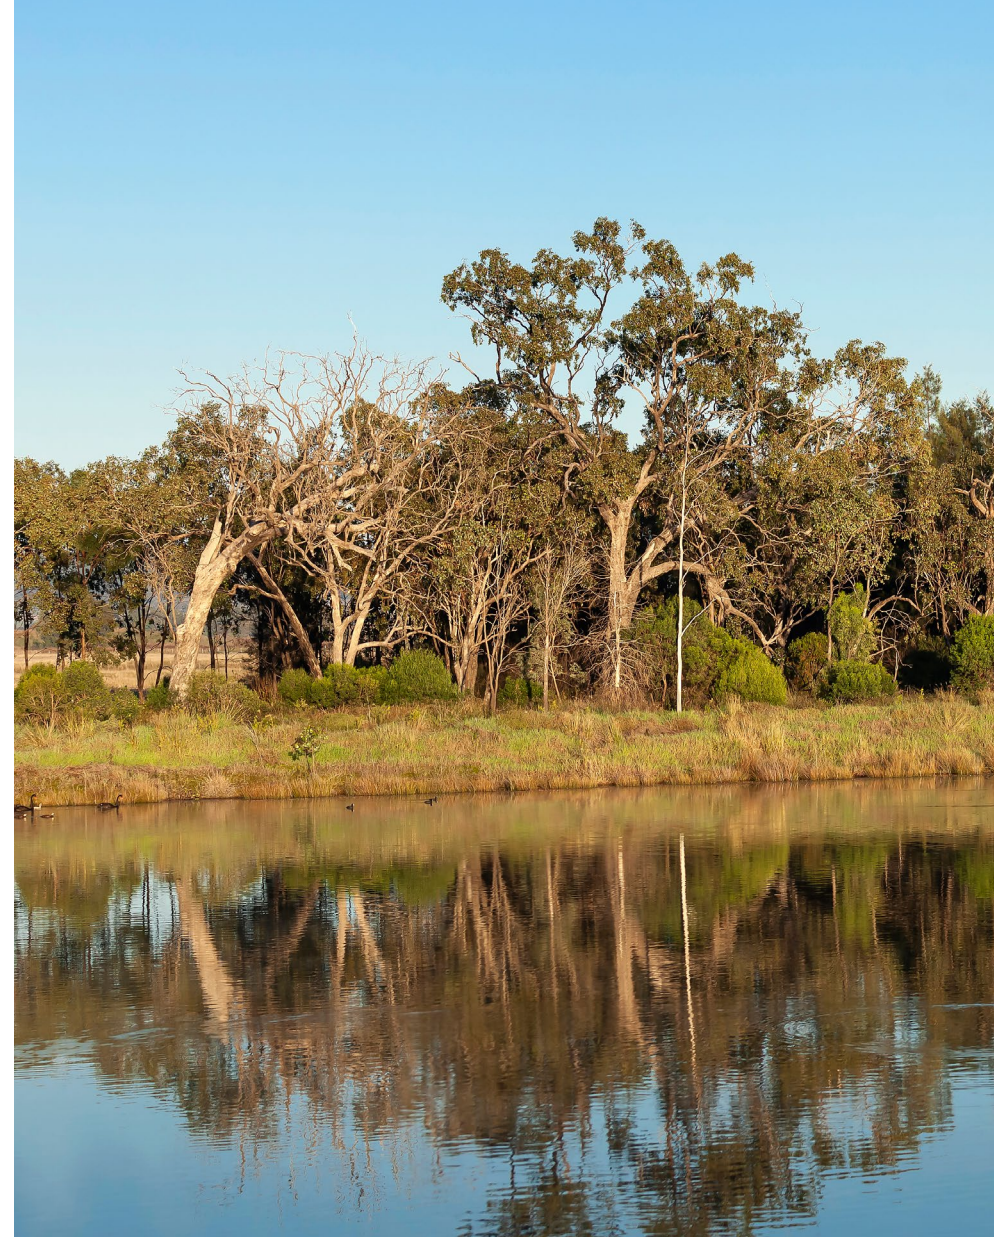

With a focus on providing value to our clients through all stages of mining, our goals for the future are to strengthen our position and expand geographically and across different commodities.

BUMA Australia offers a range of rehabilitation services, supporting clients through all stages of mining operations – positioning us as the comprehensive solution for all your mining services needs.

Services

Environmental excellence is at the core of our operations, with a strong commitment to compliance and a proactive stance in minimising regulatory risks.

Our accomplished and experienced rehabilitation professionals offer a comprehensive range of services.

Progressive rehabilitation

Progressive rehabilitation is a focus for many of our clients. For those clients, we meet environmental and economic targets during operational phases and, where applicable, rehabilitate land to meet the specific sustainability and post-mining land use criteria.

Guided by the International Council on Mining and Metals (ICMM) industry best practice, BUMA Australia offers a systematic approach to progressive rehabilitation. Our expertise lies in seamlessly integrating progressive rehabilitation into our everyday service delivery, with a view to optimising resource recovery within operations. With extensive experience in rehabilitation and environmental project outcomes, our team can balance production demands with rehabilitation needs.

We are fully aligned with the contemporary market's emphasis on carbon emission reduction, and actively support our clients in decarbonisation support, and integrating rehabilitation activities into their broader decarbonisation strategies.

Leveraging our history
and experience to
deliver for the future

across our sites

Environmental monitoring

Underpinned by ISO-certified quality and environmental management systems, our rehabilitation and closure services are underpinned by our commitment to safety, integrity and our client-focused approach.

People and careers

Our people are key to our success, now and into the future. We are passionate about providing meaningful experiences for those who come to work for us. This will look different for each person, but we want people to feel valued, engaged and empowered to grow and develop.
